

The Overview

A sensitive and ambitious redevelopment of a 2,097 SF historic commercial property in the heart of London, with a contract value of approximately £1,500,000. The 42-week programme included: mansard roof extension with two dormers and a terrace, a brick rear extension, facade cleaning, and the replacement of original timber sash windows with modern double-glazed alternatives. The ground floor commercial unit received a new timber-framed shopfront, while upper floors benefitted from metal balconies to the rear. Internally, the project included excavation and structural work to lower the existing basement, reconfiguration of partitions and ceilings, full mechanical and electrical installations, new WCs and kitchenettes, bespoke joinery, and installation of a new staircase. Practical completion was achieved on 23rd April 2024.

The Personnel

The works were carried out by a coordinated and experienced team of trade professionals, with a maximum of 12 operatives on site at peak. Site operations were overseen by Karol Gburczyk and coordinated by project director Michael Koutsoudakis. Health & Safety compliance was continually monitored by Izabela Tarasek. The collaboration of key subcontractors and internal teams ensured the delivery of this complex refurbishment to a high standard.

The Challenges

As a historic building, 12 Brushfield Street required archaeological oversight during early excavation phases. Preservation measures were undertaken carefully to meet statutory obligations which required the building contractor to simultaneously facilitate their works with archaeologists. Movement monitoring was another critical requirement during the basement lowering and structural works, ensuring the integrity of the surrounding structure and neighbouring properties. Site logistics were particularly challenging due to restricted access and the tight urban location, requiring strategic planning for deliveries, storage, and waste management. Personnel changes were posed an additional hurdle, mitigated through thorough handovers and consistent site supervision.

The Success and Improvements

The refurbishment of 12 Brushfield Street successfully enhanced the building's historic character while bringing it up to modern commercial and residential standards. Key architectural features, such as the traditional sash windows and shopfront, were sympathetically replaced with improved energy-efficient versions. Internal upgrades including bespoke joinery, new staircase, and modernised amenities have improved functionality without compromising the building's aesthetic value. The project demonstrates our capability to manage technically and logistically complex refurbishments in sensitive historic contexts while delivering outstanding results.
